Why these 60 ideas are different

Most "business ideas" lists give you a concept and wish you luck. This one hands you the **finished product**. Every idea below links to a complete, open-source AI SaaS — with Google login, Stripe payments, credit systems and the AI pipeline already built. The hard engineering is done. Your job is to pick a niche, brand it, and drive customers to it.

These aren't hypothetical markets either. For almost every template, a paid company is **already making money** with the exact same product — some at $1M, $20M, even $80M+ ARR. You're not guessing whether people will pay. They already do. You're offering them a sharper, cheaper, more focused alternative.

HOW THE MONEY WORKS — EXAMPLE: AI HEADSHOT GENERATOR

You charge users	**$29 per pack of 10 headshots**
Your AI cost per pack	**≈ $1.50**
Your margin	**≈ $27.50 per pack (~95%)**
At 100 customers / month	**≈ $2,750 MRR**
At 500 customers / month	**≈ $13,750 MRR**

The margins are high because you're reselling AI compute with a product wrapped around it. Billing, auth, webhooks and credit deduction are already handled — **distribution is your only job**. And if you follow my content, you already know distribution is exactly what we teach.

THE COMMON TECH STACK (EVERY TEMPLATE)

Next.js 14 · Prisma ORM · PostgreSQL / Supabase · NextAuth · Google OAuth · Stripe Checkout + Webhooks · Tailwind CSS · Vercel Deploy · MIT License

Revenue figures are public estimates of the competing companies, shown so you can see the size of each prize.

YOUR MOVE

Don't collect ideas. Launch one.

Sixty doors are open in this document. The person who picks **one** and ships it this weekend beats the person who bookmarks all sixty. Here's the exact sequence:

1. **Pick ONE niche you understand**
   Choose the category where you already know the customer — resellers, salons, real estate agents, job seekers.

2. **Clone & deploy in a day**
   git clone → fill the .env → npx prisma db push → deploy to Vercel. The template READMEs walk you through it.

3. **Rebrand it as yours**
   Your name, your domain, your logo, your pricing. MIT license means no royalties, no revenue share — ever.

4. **Do distribution daily**
   Reels, SEO, WhatsApp, communities. The product is solved — attention is the game. That's what we train at the Academy.

Want me to walk you through it step by step?

Join Beyond Tahir Academy — where South Asia learns to build, brand and sell with AI. Courses, live sessions and the community are waiting at **academy.beyondtahir.com**
